## DETAILED ACTION

### *Double Patenting*

Claim 9 is provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-7 of copending Application No. 10/516884.

Although the conflicting claims are not identical, they are not patentably distinct from each other because the preamble recitation of a charge generation material is seen as an inherent property of the compounds presented in the copending claims. The compounds of the copending claims have the same formula as those of the instant claim. Consequently, the property of a charge generation material must be the same.

No remarks were presented in the recent response to traverse this rejection and no terminal disclaimer was presented. Consequently the rejection is maintained.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

### *Allowable Subject Matter*

Claims 1-8 and 11 are allowed.

### *Conclusion*

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after

Art Unit: 1756

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
